

DRAKENSBERG™ Daisy hardy garden Gerbera

Bred by crossing a tough little wild species of Gerbera from the snowy mountains in South Africa, this excellent series of incredibly disease resistant, high-performance DRAKENSBERG™ daisies with rosettes of leaves produces a profusion of medium-sized flowers on sturdy stems from spring until late autumn. They thrive in summer heat and humidity, even in the Deep South. Great in landscapes and containers. Tissue culture. Hardy Zones 8-11. Best in 4" to 1 gallon pots. Peak availability weeks 50-20.
