BEGONIA BELLECONIA

DOUBLE-FLOWERED CASCADING BEGONIAS

A spectacular series of cascading begonias with a tight teardrop habit, excellent branching and a multitude of medium-sized, fully double flowers all summer long. BELLECONIA have an ideal pot habit, later developing full potential in large hanging baskets, mixed containers and window boxes. All varieties later reach lengths of four to five feet by the end of the summer. Best in partial shade, but will also perform well in full sun or full shade. BELLECONIA have always performed exceptionally well at all independent research station trials. Heat-tolerant, versatile and beautiful.

BEGONIA SUMMERWINGS

SINGLE-FLOWERED CASCADING BEGONIAS

An elegant series of cascading begonias with a bushy habit, excellent branching and a multitude of medium-sized, graceful flowers all summer long. SUMMERWINGS have an ideal pot habit, later developing full potential in large hanging baskets, mixed containers and window boxes. All varieties later reach lengths of four to five feet by the end of the summer. Best in partial shade, but will also perform well in full sun or full shade. SUMMERWINGS have always performed exceptionally well at all independent research station trials. Heat-tolerant, versatile and beautiful.

Begonia Summerwings™

From left to right: Begonia Summerwings™ Rose, Orange, and White

POT SIZE: One liner per quart pot, three liners per 10" basket

FINISHING TIMES:	4-5"	5-6 weeks
	6"/Gallon	6-8 weeks
	8"	7-9 weeks
	10-12"	10-12 weeks

PLANTING: Plant Jan-Feb for large baskets, pot Feb for April-May sales of quart pots, or later for summer sales. One soft pinch after potting recommended – good branching habit.

SOIL MIX: Peatlite mix, neutral to slightly acid (5.3) pH, good water retention important.

FERTILIZATION: Constant feed of 200-250 ppm recommended

TEMPERATURE: 65-72°F (18-22°C). Do not allow temperature to fall below 60°F. Do not finish outside.

LIGHT: Best when grown under full-sun conditions. Long day extension for winter and early spring. Photoperiod extended to 16 hour days through day length extension, night interruption or cyclical lighting.

WATERING: Avoid excess soil moisture and late day watering.

PGR: No PGR treatments required, neat and compact habit
